

I am opposed to Power Line Communications (PLC) and Broadband over Power Line (BPL) as it is currently proposed. Experience with PLC/BPL in Europe and Japan have clearly shown it to cause interference with other licensed High Frequency (HF) users.

I am particularly concerned about potentially adverse affect of this interference to the Amateur Service, especially during emergency communications. In addition, I believe the significant interference potential to other HF users, including those involved with Homeland Security, is sufficient to require extensive study to ensure that there is no interference generated by PLC/BPL. I respectfully request that FCC study PLC/BPL carefully to ensure there is no adverse interference before approving any new application.
